AN INTRODUCTION TO THIS DOCUMENT

In recent years, there has been a call for a better defined curriculum in general surgery residency training. An important starting point for curriculum development is to answer the question “What do we expect our residents to know and be able to do at the end of their training?” As described by the Accreditation Council on Graduate Medical Education, we expect our graduating residents to be competent in medical knowledge, patient care and professionalism, among others. In 2004 the General Surgery Residency Committee of the American Board of Surgery (ABS) began to develop a curriculum in general surgery patient care by delineating the specific patient care competencies that they expected of graduating general surgery residents. An expert consensus process was used to develop this document, with significant input from the Association of Program Directors in Surgery (APDS) as well as specialty societies.

The patient care competency was chosen as the subject for initial curriculum development because many groups involved in surgical education felt this area was the most in need of definition and attention. The first version of the patient care curriculum outline was published in the 2008-2009 academic year and a revised version was printed for 2009-2010. For 2010-2011, we have added an outline of topics for the medical knowledge competency. The topics in the medical knowledge domain are clinically oriented, but they differ from the patient care topics in that they apply to the body as a whole rather than specific organ systems or diseases. SCORE recommends that all residents develop proficiency in these areas of medical knowledge.

The enclosed outline of the patient care and medical knowledge portions of the SCORE curriculum is the first step in curriculum development, not a full curriculum. A full curriculum includes educational content, teaching materials and assessment. SCORE and its member organizations are continuing to develop the SCORE General Surgery Resident Curriculum Portal (portal.surgicalcore.org) for the delivery of

instructional content and assessment in support of the patient care curriculum. The website also contains specific performance objectives and educational materials for the medical knowledge topics.

This patient care and medical knowledge curriculum outline has been approved as the basis for full curriculum development by the ABS and SCORE.

EXPLANATION OF THE CURRICULUM OUTLINE

This document contains a listing of the patient care topics to be included in a curriculum for a five-year general surgical residency training program. It also specifies in general terms the depth and breadth of training that is expected for each.

To care for the surgical patient, it is necessary to master knowledge related to specific diseases and operations, but also knowledge of systems and conditions that affect the body as a whole, such as septicemia or coagulopathy. The topics in the medical knowledge portion of the SCORE curriculum are generally of this variety, as well as topics of a general nature such as biostatistics and technical aspects of minimally invasive surgery. The 78 medical knowledge topics are organized into 13 subject matter categories. Each topic will have a module devoted to it on the portal with objectives, reading material and questions.

This document will serve as the basis for the SCORE curriculum. SCORE, with the extensive involvement of the APDS Curriculum Committee, is developing specific learning objectives for each topic. Instructional materials are then identified or developed to support the teaching of that topic. It will also be necessary to develop assessment tools to determine if residents have actually acquired the desired knowledge and skills, and finally the effectiveness of the entire program will have to be regularly evaluated. When all of these have been accomplished, there will be a complete curriculum.

This document should not be viewed as static. It will be reviewed annually to introduce new topics as needed, delete obsolete topics, or change the depth and breadth of existing topics.

CLASSIFICATION SYSTEM

The patient care curriculum topics are organized into 28 organ system-based categories. Within each category are diseases/conditions as well as operations/procedures.

The topics are stratified as follows:

Diseases/Conditions

Two levels:

- **BROAD** – A graduate should be able to care for all aspects of disease and provide comprehensive management.
- **FOCUSED** – A graduate should be able to make the diagnosis, provide initial management/stabilization, but will not be expected to be able to provide comprehensive management.

Operations/Procedures

Three levels:

- **ESSENTIAL – COMMON** – Frequently performed operations in general surgery; specific procedure competency is required by end of training (and should be attainable primarily by case volume).
- **ESSENTIAL – UNCOMMON** – Rare, often urgent, operations seen in general surgery practice but not typically done in significant numbers by trainees; specific procedure competency required by end of training (but cannot be attained by case volume alone).
- **COMPLEX** – Not consistently performed by general surgeons in training and not typically performed in general surgery practice. Generic experience in complex procedures is required but not competence in individual procedures. Some residency programs may provide sufficient experience for competence in specific procedures.
